Bangalore. Karnataka

OBJECTIVE

I am actively pursuing a distinguished opportunity within the information technology industry, one that not only harnesses my skills and abilities but also propels my professional growth to unparalleled heights. I aspire to be mentored by seasoned professionals in the realm of software development, with a fervent desire to acquire profound insights and unwavering guidance.

TECHNICAL SKILLS

Reactjs	HTML/CSS	Bootstrap
JavaScript	Django	AWS
Python	SQL	Postman
Selenium	BeautifulSoup	Web Driver
WebSocket	Redis	Redux

PROJECTS

Frontend project:

- Built Personal **Portfolio** using React library. A responsive and beautifully built UI portfolio and hosted on vercel.
 - Built **TODO** list : Designed and developed a versatile and user-friendly task management application, featuring comprehensive functionality such as task addition, deletion, and editing, tailored specifically for daily routines
 - Built Food ordering application using Live swiggy Apis and used React for seamless rendering. Concepts used are React hooks, Redux, Routers, Lazy Loading, Tailwind CSS
 - Live URL for portfolio: <https://react-portfolio-amoghmasur.vercel.app/>
 - GitHub Repo: <https://github.com/Amoghmasur/react-portfolio>
-

PROFESSIONAL EXPERIENCE

Dextris Infoservices

Sep 2023-Present

Software Engineer

- Spearheading innovative web scraping initiatives, leveraging advanced tools such as BeautifulSoup and Selenium in Python. Demonstrating expertise in extracting data from dynamic web pages, contributing to enhanced data acquisition capabilities.
 - Successfully managing and optimizing the collection, processing, and storage of large datasets into MySQL databases. Ensuring data integrity and accessibility for further analysis, resulting in streamlined decision-making processes.
 - Implement user interfaces and interactive features using HTML, CSS, and Bootstrap components.
 - Use Selenium web drivers and write scripts to automate test cases for the web application of the monitoring software.
 - Currently Working with development team on building chat application using Redis, WebSocket's and Docker.
-

Junior Software Developer

- Spearheaded the development of a customer portal using React.js, Redux for state management, and React Router for seamless navigation.
- Implemented responsive design principles, resulting in a 20% increase in user engagement.
- Assisted in code reviews, debugging, and optimization to improve code quality and performance.
- Organize and handle bugs and issues reported from users, continuously update software to meet client needs.
- Assisted senior developers in building and maintaining web applications, and gained hands-on experience

EDUCATION & CERTIFICATIONS

Bachelor of Science (2017-2020)

Majors: Electronics Maths Physics
KLE P C Jabin college
